

Growth comparison between patients with rapidly progressing MPS VI and unaffected age-adjusted peers ^{11,a}

Growth comparison between patients with slowly progressing MPS VI and unaffected age-adjusted peers ^{11,b}

Adapted From Quartel, *JIMD Rep*, 2015.

^aFor the purpose of this data set, patients with uGAG levels of >200 µg/mg creatinine are considered to have rapidly progressing MPS VI.

^bFor the purpose of this data set, patients with uGAG levels of ≤200 µg/mg creatinine are considered to have slowly progressing MPS VI.
